Description: Students create an online digital portfolio to house their work from a class. This serves several purposes: less paper, experience in curating a record of their own work, product to show administrators, etc.

How it Works:
- Decide on what works for your class in a portfolio (assignments, documents, pictures, etc.)
  - Set guidelines for student websites to match this.
- Have students use a website builder to create their own page (Google sites, Weebly, Wix, etc.)
  - Create a record of their links for easy access later on for grading.
- Students will then post their work to this site when they are done and it will be there for the teacher to access later on to grade as well as for students to show a record of what they’ve done in your classes in whatever way that may benefit them (job applications, scholarships, etc.)

Things to think about:
- CASE Curriculum/Other copyrighted materials
- Access to technology (at home and in classroom)
- Meaningful assignments, photos, etc. (NOT just a bunch of clutter)
  - How can this be a tool they can use to advance themselves?
- Ensure students are taking safety precautions with their information.
- Use with AET

My very simple sample site - https://sites.google.com/aaechighschools.com/aaec-smag-sci1-2/welcome?authuser=1
