AgriScience Posters

General Description
The AgriScience Fair is a great opportunity for students to double or even triple-dip their efforts. AgriScience Fair projects can be a student’s SAE project, an LDE entry in FFA, and even a classroom assignment.

Why
All AgriScience Fair entries now MUST be a 48” wide by 36” high printed poster, much like those used in higher education.

How
The easiest way to do that is to create a single 48x36 slide in PowerPoint and then populate it with your information.
Printing: if you do not have access to a plotter printer in your school (perhaps in PR department or engineering classroom) then you can send your poster to a printer
Printing option: create the poster and then send to www.Canva.com and have in printed for you.
